

I claim : the right for all the concepts and their applications including the production and design and sales of pumps, compressors working on valves. and all related machinery related to these pumps and compressors including air conditioning and ships driven by compressors of air that blows air in water at the end of the ship.

including, if you have 2 sources of temperature, you can have a cycle that create power ^{and by} using this power, you can have a cycle to create a third source of temperature higher or lower than the 2 sources used. By combining these 2 cycles or a shortcut between these 2 cycles you can create the cycle ^{to} to create a third source higher or lower than the 2 sources by using these 2 sources. (concept in invention)

I claim : the right for the concept of reversibility of oxygen and hydrogen split of water
And all its applications including the production and sales of all engines, gas turbines
working on the hydrogen of water.

The production and sales of oxygen and hydrogen from water by this concept.
